Many good editors will allow you to place a faint guide line at 72 characters (or any other number you define) to help you stay under the limit. Unfortunately my favourite Windows editor, Notepad++ doesn't have this. If you don't mind editing in PuTTY, you can just resize the window until it is 72 wide. Example: <http://img862.imageshack.us/img862/3125/linewidthguide.png>
